

## Features added to Troy Vision V3.0.60.0

### Company Email Addresses

A new setting has been introduced which allows the user to set up a contact name for use as a company email address for example [info@troysoft.co.uk](mailto:info@troysoft.co.uk). When this contact name is used, the duplication check when creating a new contact is not performed.

Figure 1 – Company email names

Please note that both the first and last names must be entered. If either are missing then the setting will not be saved.

### Other

A problem when automatically linking a diarised note and call to the contact's company after drilling down to the contact has been rectified.

The User login job title has been increased from 40 characters to 60.

The time to fulfilment panel on the job now uses the first date that a candidate was added to the job rather than the last.

Various enhancements to improve speed and stability.
